Teacher / reviewer

Staff mode

TeacherGateModal
confirm role, then name

Student

open file

BROWSER TAB — no server, no database, no network calls

startReviewSession(name) → reviewerName

GraphContext

goal tree + maxGraph model
for the file that's open

tree data

FileProvider

reads / writes the open model
file via the File System
Access API

parseFeedbackData(raw.feedback) → loadItems()

buildFeedbackData(items) on save

FeedbackProvider

reviewerName · items · targets
linkingItemId · selectedItemId

(in-memory only — cleared on refresh)

renders

mousedown on goal row → toggleTarget(id, instanceId)

items + targets

click "link" → setLinkingItemId(id)

addItem / updateItemContent / removeItem

FeedbackArrows

SVG overlay, one per comment
locates targets via graphAnchors.ts
routes lines via arrowRouting.ts

Hierarchy Tree Graph canvas

Tree.tsx / GraphRender.tsx
each goal row carries
data-instance-id

draws line to goal anchor

Feedback Panel

one coloured box per comment
addItem / updateItemContent
removeItem / toggleTarget

editable only while reviewerName
is set — read-only otherwise

open: read + parse; write JSON

Student path
no TeacherGateModal reached → reviewerName stays null.
Feedback Panel still loads existing items, but is rendered read-only.

Comments never leave the tab except inside the saved .json — no API, no sync, no server round-trip.

model.json
{ tree, feedback? }
