Client Meeting Log-Week 6

Client Meeting Log

Adding Feedback to AMMBER — Team T6-2 Sonnet

1. Meeting Details

Item	Detail
Date	3 Sep 2026
Time	4:00 P.M.
Location / format	Room G51–G52, Ground Floor, Building 260, 200 Berkeley Street, Carlton South VIC 3053 — in person

2. Members

- Sotaro Mitsutake
- Haidong Tang (Rocky)
- Yanzhe Chen
- Yilan Fang
- Taishen Yang

3. Guided Tour of the Diagram Tool (driver.js)

The client reviewed the driver.js guided tour over the diagram tool and asked for the following changes. The intent is that a first-time user can complete the tour and have every part of the panel explained, with no gaps and no over-long text.

#	Point raised by the client	Agreed action
3.1	Not every toolbar button is explained. The drag/drop and auto-arrange buttons have no explanation at all, and zoom is not covered.	Add a tour step for every toolbar button without exception, including zoom, drag/drop and auto-arrange.

3.2	The tour overlay does not cover the whole panel, so parts of the interface are never introduced.	Extend the tour so the highlighted steps cover the entire panel; no area is to be left unexplained.
3.3	Some explanations run to several lines and are slow to read.	Keep each explanation to a single line.
3.4	Wording is wrong: the text says the symbol is dragged from the left toolbar.	Correct the wording — the symbol is dragged from the right toolbar, not the left.
3.5	The hierarchy view has no explanation in the tour.	Add a tour step explaining the hierarchy view.

4. Guidance for the Feedback System

The client asked that the feedback system explain itself inside the interface, rather than relying on the team to demonstrate it.

Function	**What the in-UI guidance must show**
Add feedback	How a reviewer creates a feedback item and attaches it to the model.
View feedback	Where existing feedback appears and how it is opened when a model is loaded.
Import feedback	How feedback is brought in from a saved file.
Link feedback	How a feedback item is linked to a goal, and how the link is shown on the diagram.

The guidance is to be visible in the interface itself
